

## SLOW ROLLER

The second base fielder uses different techniques depending on whether they get to the ball on the dirt or on the grass.

## FIELDED ON DIRT

With **first base** still being **in front** of the player, the shoulders will be aligned for a throw. The player should use the regular funnel and thumbs down technique when fielding the ground ball.

## FIELDED ON GRASS

The second baseman fielding a slow roller on the grass should tuck their glove to their chest after funneling. This will automatically align their shoulders for a throw to first base. With **first base behind** them, the glove tuck takes care of the shoulder alignment.
